

SEPTIC INSTALLERS

Below is a listing of licensed septic installers who are capable of installing new septic systems as well as repairing existing septic systems. These installers also perform soil testing on new and existing lots for the purpose of installation, repair and code-complying (B-100a) area identification. Installers with a # also pump septic systems.

When requesting a quote for soil testing for a repair or a B-100a be sure to ask if the quote includes the cost of the B-100a plan or the repair plan .

The Health District cannot make recommendations or endorsements for any of the below mentioned installers. Additional installers are located in the yellow pages under "Septic". This list is provided as a service from the Health District and should be used at the property owner's discretion.
