#### IMPORTANT NEWS REGARDING ACH (DIRECT DEPOSIT) PAYMENTS

THE NATIONAL AUTOMATED CLEARING HOUSE ASSOCIATION (NACHA) REQUIRES THAT ALL PARTIES TO AN ACH TRANSACTION MUST CLASSIFY PAYMENTS TRANSMITTED TO OR RECEIVED FROM, A FINANCIAL AGENCY OUTSIDE THE U.S. AS AN INTERNATIONAL ACH TRANSACTION (IAT). THE FEDERAL BANK SECRECY ACT REQUIRES THAT ADDITIONAL DATA BE SENT WITH AN IAT.

THERE ARE SUBSTANTIAL MONETARY PENALTIES FOR VIOLATION OF THE IAT RULES, SO IT IS IMPORTANT FOR US TO WORK TOGETHER TO ENSURE FULL COMPLIANCE WITH THE RULES.

#### ADDITIONAL INFORMATION REQUIRED

THE ORIGINATOR OF A TRANSACTION CODED AS AN IAT (WHICH INCLUDES DIRECT DEPOSITS OF PENSION PAYMENTS WHICH ULTIMATELY END UP AT A NON-U.S. FINANCIAL AGENCY) WILL BE REQUIRED TO PROVIDE THE FOLLOWING ADDITIONAL NFORMATION TO COMERICA BANK:

NAME AND PHYSICAL ADDRESS OF THE ORIGINATOR (PLAN SPONSOR IN THE CASE OF PENSION PAYMENTS) NAME AND PHYSICAL ADDRESS OF THE RECEIVER (BENEFICIARY) ACCOUNT NUMBER OF THE RECEIVER IDENTITY OF THE RECEIVER'S BANK CORRESPONDENT BANK'S NAME, BANK ID NUMBER AND BANK BRANCH COUNTRY CODE REASON FOR THE PAYMENT

#### DUE DILIGENCE FOR RETIREMENT PLANS

AS PART OF OUR DUE DILIGENCE EFFORT TO COMPLY WITH THE IAT RULES, COMERICA WILL CONTACT DIRECTLY THOSE RETIREES WHO ARE RECEIVING THEIR PENSION PAYMENTS VIA ACH AND FOR WHOM WE HAVE A FOREIGN ADDRESS. WE NEED YOUR ASSISTANCE, HOWEVER, TO IDENTIFY ANY OTHER RETIREES WHOSE PENSION PAYMENTS MIGHT BE SUBJECT TO THE IAT RULES.

ACCORDING TO NACHA, IN THE CASE OF PENSION PAYMENTS, IT IS THE EMPLOYER'S OBLIGATION TO UNDERSTAND THE LEGAL DOMICILE OF ITS RETIREES AND INQUIRE WHETHER THEY HOLD ACCOUNTS IN U.S. BANKS OR WITH OFFSHORE FINANCIAL INSTITUTIONS. THE EMPLOYER OR PLAN SPONSOR IS CONSIDERED TO BE THE "ORIGINATOR" OF THE PENSION PAYMENTS. IF YOU HAVE ANY QUESTIONS, PLEASE CONTACT YOUR RELATIONSHIP MANAGER.

## IMPORTANT NEWS REGARDING ACH (DIRECT DEPOSIT) PAYMENTS

THE NATIONAL AUTOMATED CLEARING HOUSE ASSOCIATION (NACHA) REQUIRES THAT ALL PARTIES TO AN ACH TRANSACTION MUST CLASSIFY PAYMENTS TRANSMITTED TO OR RECEIVED FROM, A FINANCIAL AGENCY OUTSIDE THE U.S. AS AN INTERNATIONAL ACH TRANSACTION (IAT). THE FEDERAL BANK SECRECY ACT REQUIRES THAT ADDITIONAL DATA BE SENT WITH AN IAT.

THERE ARE SUBSTANTIAL MONETARY PENALTIES FOR VIOLATION OF THE IAT RULES, SO IT IS IMPORTANT FOR US TO WORK TOGETHER TO ENSURE FULL COMPLIANCE WITH THE RULES.

## ADDITIONAL INFORMATION REQUIRED

THE ORIGINATOR OF A TRANSACTION CODED AS AN IAT (WHICH INCLUDES DIRECT DEPOSITS OF PENSION PAYMENTS WHICH ULTIMATELY END UP AT A NON-U.S. FINANCIAL AGENCY) WILL BE REQUIRED TO PROVIDE THE FOLLOWING ADDITIONAL NFORMATION TO COMERICA BANK:

NAME AND PHYSICAL ADDRESS OF THE ORIGINATOR (PLAN SPONSOR IN THE CASE OF PENSION PAYMENTS) NAME AND PHYSICAL ADDRESS OF THE RECEIVER (BENEFICIARY) ACCOUNT NUMBER OF THE RECEIVER IDENTITY OF THE RECEIVER'S BANK CORRESPONDENT BANK'S NAME, BANK ID NUMBER AND BANK BRANCH COUNTRY CODE REASON FOR THE PAYMENT

## DUE DILIGENCE FOR RETIREMENT PLANS

AS PART OF OUR DUE DILIGENCE EFFORT TO COMPLY WITH THE IAT RULES, COMERICA WILL CONTACT DIRECTLY THOSE RETIREES WHO ARE RECEIVING THEIR PENSION PAYMENTS VIA ACH AND FOR WHOM WE HAVE A FOREIGN ADDRESS. WE NEED YOUR ASSISTANCE, HOWEVER, TO IDENTIFY ANY OTHER RETIREES WHOSE PENSION PAYMENTS MIGHT BE SUBJECT TO THE IAT RULES.

ACCORDING TO NACHA, IN THE CASE OF PENSION PAYMENTS, IT IS THE EMPLOYER'S OBLIGATION TO UNDERSTAND THE LEGAL DOMICILE OF ITS RETIREES AND INQUIRE WHETHER THEY HOLD ACCOUNTS IN U.S. BANKS OR WITH OFFSHORE FINANCIAL INSTITUTIONS. THE EMPLOYER OR PLAN SPONSOR IS CONSIDERED TO BE THE "ORIGINATOR" OF THE PENSION PAYMENTS. IF YOU HAVE ANY QUESTIONS, PLEASE CONTACT YOUR RELATIONSHIP MANAGER.

## **Asset Class Performance**

## Fixed Income (January)

- Interest rates rose slightly in the month on less dovish communication than expected from the U.S. Federal Reserve, contributing to modestly negative returns across fixed income.

- High yield was flat for the month on rangebound credit spreads.
- Dollar strength and rising rates abroad were detractors for non-U.S. debt.

## Equity (January)

+ Equity markets were mixed during January, with concentration in U.S. large cap buoying returns. Small caps declined as expectations for near-term rate cuts were tempered.

- + International developed markets rose slightly with positive returns in Japan carrying the index.
- China continues to weigh on the emerging market equity space amid a distressed property sector and lack luster economic conditions.

## Real Asset / Alternatives (January)

- REITs, a rate sensitive sector, fell sharply to start the year on a less dovish U.S. Federal Reserve.

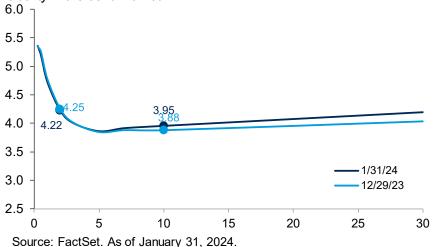

+ For commodities, rising oil and livestock prices offset negative returns in hard and soft commodities.

+ Hedge funds, reported on a month lag, were positive in December. Equity hedged were the best performing strategy type.

## **Fixed Income Market Update**

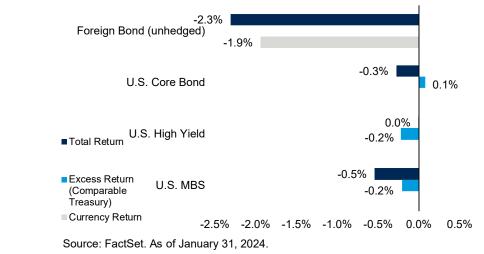

## **U.S. Treasury Yield Curve**

Short end rates were unchanged and the long end rose slightly as investor expectations for a rate cut in March shifted. A hawkish Federal Reserve and mixed economic signals have contributed to the persistent volatility in the bond market.

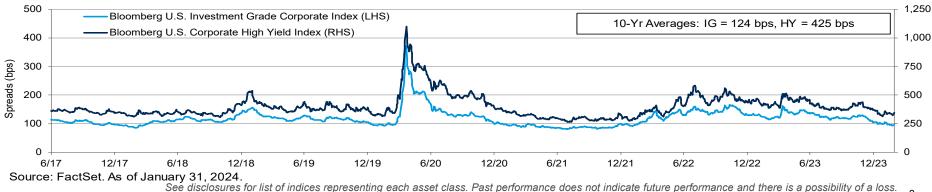

## Index Performance Attribution (January 2023)

Fixed income markets declined across the board, however, core bonds posted a slight excess return over Treasuries, driven by spread tightening in asset-backed securities.

## Credit Market Spreads – Trailing 5 Years

Investment grade credit spreads were flat while high yield widened slightly in January. Fundamentals have softened however remain reasonably strong in the corporate sectors as companies continue to sit on termed out debt and higher yields continue to attract investor demand.

## **Equity Market Update**

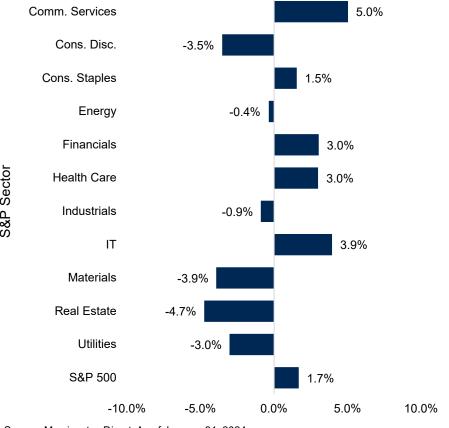

## Market Capitalization & Style Performance (January 2023)

Sentiment for small caps, the biggest beneficiaries of rate cuts, notably shifted amid changing hopes of near-term U.S. Federal Reserve policy. Developed non-U.S. markets were hindered by lack luster economic growth and rising tensions in the middle east. Emerging markets were largely negative on a distressed Chinese economy.

## U.S. Equities – Returns by Sector (January 2023)

Sector returns in the U.S. were mixed during the month. The magnificent seven continues to outperform which has buoyed returns in U.S. Large Cap. Rate sensitive sectors such as real estate and materials declined on a hawkish U.S. Federal Reserve.

## **Real Asset Market Update**

# $\mathbf{O}$

## **Commodity Performance (January 2023)**

Commodities struggled in January, driven primarily by declining hard and soft commodities. Oil prices rose on sharply lower production as well as disruptions in the Red Sea, which helped offset negative performance elsewhere in the commodities asset class.

## **REIT Sector Performance (January 2023)**

REITs had headwinds due to the U.S. Federal Reserve stance and rising interest rate environment. Tempered expectations of the Fed rate cuts contributed to the broad base weakness. Data centers have continued to perform on the back of artificial intelligence demand.

Client portfolio performance is presented net of underlying investment manager fees but gross of Fiducient Advisors' fees. Manager performance for mutual funds and ETFs is based on NAV and provided by Lipper. Performance for non-mutual fund or ETF investments is based on the returns provided by managers, calculations based on a manager statement, or calculations based on a statement or data from the client's custodian. Funds may include returns of an equivalent share class with a longer return history if period includes dates prior to the fund's inception. Returns are net of fees unless otherwise stated. The fund's inception date represents the first month the client made the investment. Composite performance includes all funds held in the composite since inception. Inception dates for asset class composites reflect the start date at which these returns could be calculated using historical and existing system capabilities and may vary from the inception dates of underlying component strategies.

#### Additional:

- Equity sector returns are calculated by Russell and MSCI for domestic and international markets, respectively. MSCI sector definitions correspond to the MSCI GICS<sup>®</sup> classification (Global Industry Classification System); Russell uses its own sector and industry classifications.
- MSCI country returns are calculated by MSCI and are free float-adjusted market capitalization indices that are designed to measure equity market performance in each specific country.
- Currency returns are calculated using Bloomberg's historical spot rate indices and are calculated using the U.S. dollar as the base currency.
- The Index of Leading Economic Indicators, calculated by The Conference Board, is used as a barometer of economic activity over a range of three to six months. The index is used to determine the direction and stability of the economy. The composite index of leading indicators, which is derived from 10 leading indicators, helps to signal turning points in the economy and forecast economic cycles. The leading indicators are the following: average weekly hours, average weekly initial claims, manufacturers' new orders, both consumer and non-defense capital goods, vendor performance, building permits, stock prices, money supply (M2), the interestrate spread and the index of consumer expectations.
- S&P Target Date Indexes are constructed using a survey method of current target date investments with \$100 million or more in assets under management. Allocations for each vintage are comprised of exchange-traded-funds that represent respective asset classes used in target date portfolios. The indexes are designed to represent a market consensus glide path.

#### DEFINITION OF KEY STATISTICS AND TERMS

- Returns: A percentage figure used when reporting historical average compounded rate of investment return. All returns are annualized if the period for which they are calculated exceeds one year.
- Universe Comparison: The universe compares the fund's returns to a group of other investment portfolios with similar investment strategies. The returns for the fund, the index and the universe percentiles are displayed. A percentile ranking of 1 is the best, while a percentile ranking of 100 is the worst. For example, a ranking of 50 indicates the fund outperformed half of the universe. A ranking of 25 indicates the fund was in the top 25% of the universe, outperforming75%.
- Returns In Up/Down Markets: This measures how the fund performed in both up and down markets. The methodology is to segregate the performance for each time period into the quarters in which the market, as defined by the index, was positive and negative. Quarters with negative index returns are treated as down markets, and quarters with positive index returns are treated as up markets. Thus, in a 3 year or 12 quarter period, there might be 4 down quarters and 8 up quarters. A simple arithmetic average of returns is calculated for the fund and the index based on the up quarters. A simple arithmetic average of returns is calculated for the fund and the index based on the down quarters. The up market capture ratio is the ratio of the fund's return in up markets to the index. The down market capture ratio is the ratio of the fund's return in down markets to the index. Ideally, the fund would have a greater up market capture ratio than down market capture ratio.
- Standard Deviation: Standard deviation is a statistical measure of the range of performance within which the total returns of a fund fall. When a fund has a high standard deviation, the range of performance is very wide, meaning there is a greater volatility. Approximately 68% of the time, the total return of any given fund will differ from the average total return by no more than plus or minus the standard deviation figure. Ninety-five percent of the time, a fund's total return will be within a range of plus or minus two times the standard deviation from the average total return. If the quarterly or monthly returns are all the same the standard deviation deviation. Standard deviation can be misleading as a risk indicator for funds with high total returns because large positive deviations will increase the standard deviation without a corresponding increase in the risk of the fund. While positive volatility is welcome, negative is not.
- R-Squared: This reflects the percentage of a fund's movements that are explained by movements in its benchmark index. An R-squared of 100 means that all movements of a fund are completely explained by movements in the index. Conversely, a low R-squared indicates very few of the fund's movements are explained by movements in the benchmark index. R-squared can also be used to ascertain the significance of a particular beta. Generally, a higher R-squared will indicate a more reliable beta figure. If the R-squared is lower, then the beta is less relevant to the fund's performance. A measure of diversification, R-squared indicates the extent to which fluctuations in portfolio returns are explained by market. An R-squared = 0.70 implies that 70% of the fluctuation in a portfolio's return is explained by the fluctuation in the market. In this instance, overweighting or underweighting of industry groups or individual securities is responsible for 30% of the fund's movement.
- Beta: This is a measure of a fund's market risk. The beta of the market is 1.00. Accordingly, a fund with a 1.10 beta is expected to perform 10% better than the market in up markets and 10% worse that the market in down markets. It is important to note, however, a low fund beta does not imply the fund has a low level of volatility; rather, a low beta means only that the fund's market-related risk is low. Because beta analyzes the market risk of a fund by showing how responsive the fund is to the market, its usefulness depends on the degree to which the markets determine the fund's total risk (indicated by R-squared).
- Alpha: The Alpha is the nonsystematic return, or the return that can't be attributed to the market. It can be thought of as how the <u>manager</u> performed if the market's return was zero. A <u>positive</u> alpha implies the manager added value to the return of the portfolio over that of the market. A <u>negative</u> alpha implies the manager did not contribute any value over the performance of the market.
- Sharpe Ratio: The Sharpe ratio is the excess return per unit of total risk as measured by standard deviation. Higher numbers are better, indicating more return for the level of risk experienced. The ratio is a fund's return minus the risk-free rate of return (30-day T-Bill rate) divided by the fund's standard deviation. The higher the Sharpe ratio, the more reward you are receiving per unit of total risk. This measure can be used to rank the performance of mutual funds or other portfolios.
- Treynor Ratio: The Treynor ratio measures returns earned in excess of that which could have been earned on a riskless investment per each unit of market risk. The ratio relates excess return over the risk-free rate to the additional risk taken; however, systematic risk is used instead of total risk. The Treynor ratio is similar to the Sharpe ratio, except in the fact that it uses the beta to evaluate the returns rather than the standard deviation of portfolio returns. High values mean better return for risk taken.

- Tracking Error: Tracking error measures the volatility of the difference in annual returns between the manager and the index. This value is calculated by measuring the standard deviation of the difference between the manager and index returns. For example, a tracking error of +/- 5 would mean there is about a 68% chance (1 standard deviation event) that the manager's returns will fall within +/- 5% of the benchmark's annual return.
- Information Ratio: The information ratio is a measure of the consistency of excess return. This value is determined by taking the annualized excess return over a benchmark (style benchmark by default) and dividing it by the standard deviation of excess return.
- Consistency: Consistency shows the percent of the periods the fund has beaten the index and the percent of the periods the index has beat the fund. A high average for the fund (e.g., over 50) is desirable, indicating the fund has beaten the index frequently.
- Downside Risk: Downside risk is a measure similar to standard deviation but focuses only on the negative movements of the return series. It is calculated by taking the standard deviation of the negative quarterly set of returns. The higher the factor, the riskier the product.
- M-Squared: M-squared, or the Modigliani risk-adjusted performance measure is used to characterize how well a portfolio's return rewards an investor for the amount of risk taken, relative to that of some benchmark portfolio and to the risk-free rate.

#### **DEFINITION OF KEY PRIVATE EQUITY TERMS**

- PIC (Paid in Capital): The amount of committed capital that has been transferred from the limited partner to the general partner.
- TVPI (Total Value to Paid in Capital): Money returned to limited partners plus the fund's unrealized investments, divided by money paid-in to the partnership. The TVPI should equal RVPI plus DPI.
- DPI (Distribution to Paid In Capital): Money returned (distributions) to limited partners divided by money paid in to the partnership. Also called cash-on-cash multiple.
- RVPI (Residual Value to Paid In Capital): The value of a fund's unrealized investments divided by money paid-in to the partnership.
- Internal rate of return (IRR): This is the most appropriate performance benchmark for private equity investments. It is a time-weighted return expressed as a percentage. IRR uses the present sum of cash drawdowns (money invested), the present value of distributions (money returned from investments) and the current value of unrealized investments and applies a discount.
- **Commitment:** Every investor in a private equity fund commits to investing a specified sum of money in the fund partnership over a specified period of time. The fund records this as the limited partnership's capital commitment. The sum of capital commitments is equal to the size of the fund.
- Capital Distribution: These are the returns that an investor in a private equity fund receives. It is the income and capital realized from investments less expenses and liabilities. Once a limited partner has had their cost of investment returned, further distributions are actual profit. The partnership agreement determines the timing of distributions to the limited partner. It will also determine how profits are divided among the limited partners and general partner.
- Carried Interest: The share of profits that the fund manager is due once it has returned the cost of investment to investors. Carried interest is normally expressed as a percentage of the total profits of the fund.
- Co-Investment: Co-Investments are minority investments made alongside a private equity investor in an LBO, a recapitalization, or an expansion capital transaction. It is a passive, non-controlling investment, as the
  private equity firm involved will typically exercise control and perform monitoring functions.
- General Partner (GP): This can refer to the top-ranking partners at a private equity firm as well as the firm managing the private equity fund.
- **GP Commitments:** It is normal practice for the GP managing a private equity fund to also make a financial commitment to the fund on the same basis as the LPs in the fund, and this is seen as an important factor driving the alignment of GP and LP interests. The historic benchmark for GP commitments has been 1% of the total fund size, but this is by no means universal, and many GPs commit significantly larger amounts. Furthermore, there has been a marked trend towards GPs making larger commitments to their funds over recent years.
- Leveraged Buy-Out (LBO): The acquisition of a company using debt and equity finance.
- Limited Partner (LP): Institutions or high-net-worth individuals/sophisticated investors that contribute capital to a private equity fund.
- Public Market Equivalent (PME): Performance measure used to evaluate performance relative to the market. It is calculated as the ratio of the discounted value of the LP's inflows divided by the discounted value of outflows, with the discounting performed using realized market returns.
- Primaries: An original investment vehicle that invests directly into a company or asset.

#### VALUATION POLICY

Fiducient Advisors does not engage an independent third-party pricing service to value securities. Our reports are generated using the security prices provided by custodians used by our clients. Our custodial pricing hierarchy is available upon request. If a client holds a security not reported by the first custodian within the hierarchy, the valuation is generated from the next custodian within the hierarchy, and so forth. Each custodian uses pricing services from outside vendors, where the vendors may generate nominally different prices. Therefore, this report can reflect minor valuation differences from those contained in a custodian's report. In rare instances where FA overrides a custodial price, prices are taken from Bloomberg.

#### **REPORTING POLICY**

Manager performance for mutual funds and ETFs is based on NAV and provided by Lipper. Performance for non-mutual fund or ETF investments is based on the returns provided by managers, calculations based on a manager statement, or calculations based on a statement or data from the client's custodian. Unless specified otherwise, all returns are net of individual manager fees, represent total returns and are annualized for periods greater than one year. The deduction of fees produces a compounding effect that reduces the total rate of return over time. As an example, the effect of investment management fees on the total value of a client's portfolio assuming (a) quarterly fee assessment, (b) \$1,000,000 investment, (c) portfolio return of 8% a year, and (d) 0.50% annual investment advisory fee would be \$5,228 in the first year, and cumulative effects of \$30,342 over five years and \$73,826 over ten years. Additional information on advisory fees charged by Fiducient Advisors are described in Part 2 of the Form ADV.
